

No-one's closer to the music

Pick any of the world's most famous music recordings or movie soundtracks and the chances are that Tannoy played a part. That's because, from day one, more recording studios in Europe and the USA have chosen Tannoy monitors than any other.

When it really matters, artists and recording professionals have always known they can trust Tannoy to deliver a sound that gets as close to the essence of the performance as possible. It's this kind of dedication to sound integrity that Tannoy designs and engineers into every speaker carrying their name.

The power to move you.

Definition from Tannoy. The true audiophile technology to convince you.

In nature, all sounds start from a single point, with waves radiating out evenly in every direction.

Tannoy's Dual Concentric™ technology emulates this by placing the tweeter directly behind the bass cone, so again the sound comes from a single point and all frequencies reach your ear simultaneously.

If one thing defines music, it's the power it has to move people. The best audio equipment brings that emotion to life in all its shades and subtleties. Using technology direct from the world of professional sound recording and reproduction, Definition speakers deliver the ultimate in dynamic range, stereo precision and detail resolution. Each model has been designed to compliment the very best audiophile electronics.

Definition speakers are uniquely equipped to succeed, featuring as they do Tannoy's patented Dual Concentric™ drive unit technology. The rigidity of the die-cast chassis combined with the oversized magnet assembly ensures this drive unit provides reliable, effortless performance.

Not only do the real wood veneer cabinets look great, but the multi-faceted design play their part in enhancing the acoustic performance. Non-parallel side panels help break up standing waves within the cabinet, minimising colouration and interference from panel resonance.

Even at high volumes, the result of all this is superb musical dynamics with low distortion and crisp, pinpoint stereo imaging.

The musical truth, the whole truth and nothing but the truth.

D300 *Slim and elegant floor standing speaker for small to medium sized rooms. Superb stereo imaging from the single 165mm Dual Concentric™ drive unit and deep bass capability, despite its compact size.*

D500 *To make the most of the modest cabinet proportions, this model employs a double-chamber reflex system for extended and controlled bass. High power handling with impressive accuracy.*

D700 *Imposing floor standing model for large rooms. The D700 is capable of generating the full scale and impact of live music. Stunning performance when used as the main pair in a high quality home theatre system.*

D900 *Spectacular performance from the flagship Definition model. Enormous power handling capability with astonishing impact and yet capable of portraying all of the subtlety and emotion of music and film sound tracks even at low listening levels.*

The patented Tannoy Dual Concentric™ driver

The ultimate Home Cinema experience.

The hallmarks of wide dynamic range, high power handling and pin-point accuracy which characterise the Tannoy Dual Concentric™ drive unit makes Definition the ideal solution for home cinema, especially 5.1.

All models can easily handle the most demanding movie soundtracks, generating the scale, excitement and impact so everybody can enjoy the best seat in the house.

D750

A reference standard centre channel loudspeaker for the home cinema connoisseur. A heavy gauge steel plate lining in the cabinet provides additional damping and ensures that the drive units are fully magnetically shielded. The D750 boasts ultra high performance and has been called '...the biggest, boldest, heaviest and also, surely, the best-made centre-speaker ever!' by the specialist Home Cinema press (Home Cinema Choice, 1998).

Best Home Cinema Speaker System

"Leagues ahead in both price and performance, is the Tannoy Definition D500/ D750 set up... these huge, beautiful speakers produce 'a soundstage with amazing three-dimensional depth'" (What Video & TV January 1999).
