TANNOY®

High performance and ease
of install ... with style

Designed for a wide variety of sound reinforcement applications, the Tannoy Di Series is a range of premium performance, ultra compact surface mount weather resistant loudspeakers.

Equipped with Tannoy's exclusive point source, constant directivity drive unit technologies, the Di products deliver an acoustic performance of outstanding clarity, definition and detail with class leading vocal intelligibility. The constant directivity and uniform dispersion nature of the drivers utilised allows either vertical or horizontal orientations on walls or ceilings with no compromise to performance.

Available in a textured black or white painted finish with matching rubber trims, the outstandingly durable and scuff resistant, high impact polystyrene (HIPS) Di enclosure is weather resistant, rated IP64 to EN60529 (IEC529); a design fully optimised for consistent performance in adverse conditions indoors or out.

All models are full bandwidth loudspeakers designed for commercial, professional and residential applications where environment durability and high quality sonic performance are required. Indoor or outdoor, these speakers are ideally suited to stereo or monaural background or foreground music systems in applications as diverse as theme parks, retail premises, restaurants and cafés, corporate audio visual and houses of worship.

TANNOY ICT™ DRIVE UNIT

The Inductive Coupling Technology drive unit addresses the two most common component failures experienced in background music and sound reinforcement systems, the tweeter and the crossover reliability. The use of a wireless electromagnetic tweeter means that no crossover is required in the design; this therefore ensures that an ICT™ unit cannot be burned out through system misuse or by constant heavy usage. The mineral loaded polypropylene cone material and nitrile rubber surround further enhance durability, weather resistance and long-term reliability.

TANNOY DUAL CONCENTRIC™ DRIVE UNIT

Renowned for its extraordinary power handling, high sensitivity, extended frequency response and very low distortion, Tannoy's Dual Concentric™ drive unit provides a wide and controlled dispersion ensuring optimum coverage. By placing the high frequency drive unit physically inside the low frequency driver, Tannoy engineers have created a true point source that exhibits constant directivity and unparalleled linearity. Perfect for this type of application, the driver system generates a spherical wave front unaffected by energy loss at the crossover frequency in either vertical or horizontal planes allowing highly flexible speaker placement.

While the Dual Concentric™ drivers in the Di range use a complex multi fibre paper pulp mix for the mid bass cone to achieve optimum acoustic performance, a comprehensive resin treatment process ensures the materials weather resistance. The concentrically positioned HF unit has a ferrofluid cooled titanium dome, with a neodymium magnet system, equipped with dynamic high frequency protection.

TRANSFORMER MODELS

All models are available in versions equipped with an internally mounted low insertion loss line transformer for 70V or 100V distributed sound applications. Wattage taps are easily configurable using the rotary tapping switch concealed below the rubber trim.

Installing Di

A multi position yoke bracket is supplied with all models for simple and rapid installation. To further increase install flexibility, two optional mounting accessories are available - a pole mount adaptor kit and the unique, pre-wired K-Ball™, a fully adjustable one-size-fits-all wall bracket.

Available in black or white, the pole mount adaptor kit for the Tannoy Di yoke or K-Ball™ installation brackets is designed to facilitate simple pole mounting of Di speakers in a wide range of applications indoors or out.

POLE MOUNT
ADAPTOR

Customising Di

The Di speaker cabinet may be painted to suit the décor of the installation. Further architectural modification is possible by changing the colour of the rubber trim around the grille. The standard combination of white on white and black on black can be factory customised to order as required.

Two standard colour trim options are available from stock; enabling black or white product to be supplied pre-fitted with either red and blue trims. Other custom colours can also be created to suit specific requirements, but only as a special order customisation subject to minimum order quantities.

This aesthetic flexibility will be of special interest to architects and consultants specifying a colour coordinated interior or for corporate branding purposes.

The unique K-Ball™

Simple to install, the K-Ball™ is a multi angle bracket which ensures that the speaker can be easily positioned for optimum coverage of the listening area. Designed to facilitate pre-wiring of the system, the K-Ball™ carries a wiring loom through the arm of the bracket to a Euroblock connector plug located in the ball. When mounted in conjunction with a standard conduit junction box (J-box) the assembly is then ready to receive the speaker during the commissioning stage of the install.

A recess on the rear of the enclosure contains the Euroblock connector socket which completes the signal path when the speaker is offered up to the bracket and pushed into place. The speaker may then be swivelled into the desired angle for optimum coverage before tightening the locking collar. A secondary support line can be secured to the tie back point and the rubber weather-sealing boot located.

This innovative bracket is available in black or white as an optional accessory for all the Di passive models.
