VXP 12HP

TANNOY.

Product Description

Conceived, engineered and built with precision in the United Kingdom, VXP Series represents a brand new evolution in Tannoy's core philosophies in self-powered loudspeaker design. Tannoy VXP 12HP combines the technological refinement of the passive VX 12HP with the brand new IDEEA[™] integrated power module from Lab.gruppen. The result is a compact, ultra-reliable and efficient, self-powered loudspeaker offering a punchy and sonically superior solution for small-medium scale sound reinforcement and high performance speech reproduction where clarity and vocal character are paramount. The VXP 12HP has also been acoustically matched with the wider range of VXP Series models, making it a perfectly capable component within much larger installations.

The VXP 12HP is built around a single 300mm (12") PowerDual[™] driver mounted within a rugged birch plywood cabinet with aesthetically profiled edges and airnet-backed, powder-coated steel grille. The latest version of Tannoy's exclusive point source, constant directivity Dual Concentric drive unit ensures high sensitivity and exceptional efficiency. This unique configuration delivers optimum coverage, exceptional forward gain and excellent acoustic performance. The dispersion characteristics of the Dual also enhance speaker placement flexibility; allowing vertical or horizontal mounting of single or multi-cabinet arrays without any compromise to sound quality.

The perfectly matched integrated Lab.gruppen IDEEA (IntelliDrive Energy Efficient Amplifier) modules are designed to handle the demands of fixed installation audio, with the inherent extended duty cycles of around-the-clock operation and very high performance demands, while offering the durability, unmatched power output and clarity required by portable applications. To ensure a long and trouble-free service life, IDEEA modules incorporate extensive features to safeguard internal circuits and driver compliment.

At the heart of the IDEEA module is a patented Class D output stage capable of high power levels with very low distortion and minimal current draw – all with a net operating efficiency in excess of 80%. A universal switching power supply accepts any mains voltage from 70 - 265V (+/- 10%) at 50Hz or 60Hz through the appropriate IEC cord. In Auto mode, the speaker turns on with signal present and switches to standby mode after 20 minutes of no input, in doing so reducing power consumption to less than 1 W (while in standby). Manual control mode allows the speaker to be turned on and off as required. Also provided is a switchable 90 Hz high-pass filter for use when adding a subwoofer.

Audio connection is via XLR Input and power via PowerCON (included) on rear panel. VXP 12HP is available in black or white textured paint finish as standard, with matching grilles, and is also available in custom matched RAL colours as an option.

Features

- 300mm (12") PowerDual™ full-range driver
- Tightly controlled 90 degree dispersion for optimum coverage and forward gain
- Peak output 129 dB
- Integrated Lab gruppen IDEEA electronics providing ultra-reliable Class D amplification
- Versatile mounting via optional custom designed hardware
- Pole-mountable for small-medium scale portable PA applications
- Exceptional clarity and SPL for a cabinet of this size
- Rugged and highly compact birch plywood enclosure
- Available in black or white textured paint finish custom colours optional
- · XLR input and link, PowerCON mains (included)

Applications

- Performance Arts Spaces
- Theatres & Auditoria
- Bars, pubs and nightclubs
- Small-medium scale live PA
- Theme parks and leisure venues
- Gymnasiums and small/medium sports arenas
- Portable corporate AV
- Conference rooms
- Houses of worship
 Cinemas
- Onicin
